

TWM-103

103" Tilting Wall Mount

When it comes to the biggest jobs, the incredible TWM-103 can handle flat-panel TVs up to 103" (diagonal). Dual horizontal wall plates permit mounting to multiple anchor points including 16", 24", and 36" stud centers to keep the display securely in place.

Slotted mounting brackets instantly compensate for misaligned holes for quicker installation. Built-in lateral shift lets installers quickly and easily "hook" the display onto the mount, and the integrated lateral shift bar lets one slide the display left to right for perfect center-of-the-wall alignment. There's also our rapid leveling system that makes corner-to-corner leveling fast and simple, and built-in cable management. Plus, the mount can be modified for side-by-side, or vertically stacked video wall applications. The mount can be customized to meet unique venue specifications.
